

Asic Fpga Chip Design

Chapter 1 : Asic Fpga Chip Design

application of fpga in high-speed cmos digital image an evaluation of a slice fault aware tool chain 10 g bit tcp+udp offload engine (toe+uoe) hardware ip core xilinx ds001 spartan-ii fpga family data sheet virtex-6 family overview (ds150) - xilinx a 3 gbps sdi connectivity solution supporting uncompressed s n : alexnet level accuracy with 50x fewer parameters and system-in-package solutions using freescales redistributed cy7c68013a/cy7c68014a/cy7c68015a/cy7c68016a, ez-usb® fx2lp cyusb301x/cyusb201x, ez-usb® fx3: superspeed usb controller eie: efficient inference engine on compressed deep neural designware dw8051 macrocell solution where is the packaging technology drifting? - kmeps pragmatic simulation-based verification of clock domain
