Water is a relatively "light" molecule with a molar mass (molecular weight) of 18.01, giving the vapor a density of 0.623 relative to air. the high dielectric constant of water is largely responsible for its good solvent properties is, however, a weak electrolyte when pure, but with dissolved ions increases its conductivity by several orders of magnitude. Schmidt number (sc) is a dimensionless number defined as the ratio of momentum diffusivity (kinematic viscosity) and mass diffusivity, and is used to characterize fluid flows in which there are simultaneous momentum and mass diffusion convection processes. it was named after the german engineer ernst heinrich wilhelm schmidt (1892–1975). the schmidt number is the ratio of the shear component Need any test bank or solutions manual please contact me email: testbanks01@gmailm if you are looking for a test bank or a solution manual for your academic textbook then you are in the right place Uah global temperature update for november 2017: +0.36 deg. c december 1st, 2017 by roy w. spencer, ph. d.
